How to save indesign file smaller. How to make file size smaller in indesign. How to make my indesign file smaller. Indesign pdf smaller file size. How to reduce file size in indesign.

Ben wrote: I have a 60+ page CS3 file that saves at around 450MB and growing. Doing a quick preflight check shows that there are no embedded images nor saved image previews. The linked photos themselves are high resolution, around 2-3MB a piece. If it's not saving any image data and merely linking 500 .jpg images, why would this file be so large? Ironically, I know the answer to this one because of my long history with QuarkXPress, which also exhibits this curious phenomenon. There are a number of things that can make your InDesign files huge. The first thing to always try when trying to reduce file size is to choose File > Save As. That clears out any junk that has accumulated while you've been working on the file. However, in this case, the problem is, in fact, your images. These images were probably saved from a digital camera to disk, and then imported directly into InDesign. Unfortunately, many cameras save their files at 72 dpi (pixels per inch, sometimes called dpi). It may be a 17 MB, 3000 x 2000 digital capture, but if it's saved at 72 dpi, then it's about 41 by 27 inches large. So you import it into InDesign and scale it down to the proper size, which increases its effective resolution (watch the Info palette to see original vs. effective ppi). Now here's the rub: When you import an image, InDesign saves a low-res "thumbnail" preview of it, right? That's what's stored in the InDesign file itself (so you can still see the image if the original on-disc image is missing). But when you import a 72 dpi image, InDesign saves the entire image as the preview! It essentially embeds the whole thing because it's trying to save a low res (72 ppi) version of your 72 ppi image. The solution: Open your file in Photoshop, choose Image > Image Size, turn off the Resample Image checkbox (if you don't want the image data to change), then set the resolution to something reasonable (such as 225 or 250 ppi). Now save the file and reimport it into InDesign. InDesign places the image at the proper size, makes a much smaller proxy image, and the next time you do a Save As, your file size should drop considerably. Sure, there are other reasons that InDesign files can get huge, but images are the main problem I've encountered. (By the way, I discovered why InDesign files jumped in size between CS and CS2: Color management was turned on by default in CS2 and InDesign started embedding CMYK profiles in its files. A CMYK profile may be 1-2Mb in size, so the minimum InDesign file size-what you'd get if you just had an empty INDD file-suddenly got much bigger.) By the way, Ben later replied: A quick batch in Photoshop helped me to fix these up to about 180dpi at no larger than 8 inches in either horizontal or vertical. The file size wasn't decreasing until as you suggested doing a simple Save as. Sometimes it's the slightest things that can trip you up. PDF (Portable Document Format) is the safest, most compatible way to share a document. A PDF will embed fonts and images and preserve pixel and vector information. A PDF can be high quality for professional printing or a small file for sharing via email or uploading to the web. Below are the instructions to save a PDF that is looks great but is has the smallest file size. Save your document Then, Save As a PDF. Click Save (From InDesign choose File > Adobe PDF Preset > Smallest File Size Set the Adobe PDF Preset to Smallest File Size. (Check to View PDF after Saving to automatically open the file in your PDF viewer) IMPORTANT! Under Compression change Image Quality to High That's it! Be sure to check the PDF after saving to make sure everything is looking good. Check the file size (Right Click of the file then Get Info on a Mac or Properties on a PC). Depending on your file you may find it to be a few hundred KB (less than a MB) Never email a file over SMG. It may not make it to the recipient. An error occurred while saving the comment By M.A. Helt Adobe InDesign allows users to export files in several formats. The PDF, or Portable Document Format, is used when you want to send a file to someone who does not have InDesign. PDF files can be opened with Adobe Acrobat Reader and many other third party PDF readers. InDesign comes with several preset PDF export options but also allows the user to customize the settings. If the PDF will be printed, either on a desktop printer or a professional offset press, higher quality settings should be selected. If you will only view the PDF on-screen, select lower quality settings to keep the file size smaller. Select Export from the File menu. Name your file and select a destination to save the file. Click Save. Select "Smallest File Size" from the Adobe PDF Preset drop down menu. Click "Compression" in the lefthand side menu. Downsample each of the images to 72 pixels per inch. Select the image compression you want to use for the color and grayscale images. Choose low if you are trying to have the smallest file size possible. However, if you want the images to render more clearly, and are willing to have a slightly larger file, select medium. Select the appropriate compression format. If your document contains mostly photographs, select Automatic (JPEG 2000). If your document contains mostly solid color graphics such as logos, clip art, charts or graphs, select ZIP compression. Select Output from the lefthand menu then click on the Ink Manager button. Convert any spot colors to process. You can identify a spot color by looking for a circle inside of a square icon in the left hand column of the ink manager window. To convert to process color, click on the spot color icon. Click the OK button when complete. Finding hidden panels, controls, or menu items Welcome to InDesign Secrets You have to be logged in to save. Not a member? Join Today - it's FREE! Sometimes, the InDesign PDF file you are using is too large, making it difficult to share with others. This article looks at how to compress PDF in InDesign by following a step-by-step guide. It will provide all the details you need on how to reduce the size of your InDesign file for PDF quickly and easily. Make sharing your PDF files with a client or employer effortless by using the necessary tools designed for this purpose. One such software program is Wondershare PDFelement - PDF Editor, which will help you compress PDF in InDesign. PDFelement is an all-in-one PDF solution for all your PDF needs. It has all the key features that are necessary for handling any PDF document. This powerful PDF editing tool allows you to edit, extract data, open and save PDF documents while supporting other file types such as Word, PowerPoint, Excel, and HTML. List of Main Features: Compress PDF - You can compress large files by simply using the available controls to make your files manageable. Edit - You can edit your document using different modes like line mode and paragraph mode to change font size, color, and style of text. You can also perform a spell check on misspelled words, add watermarks, numbers, and insert links. Annotate - You can add comments, including attachments, delete annotations and even add stamps to your PDF files. Text markups allow you to highlight or strikethrough text in your document. Print - You can reproduce your text and graphics by customizing your printouts. OCR - The

Optical Character Recognition feature detects scanned images, making your PDF document searchable and editable. Create and Convert - You can create and convert PDF files to other file formats such as RTF, HTML, HWP and MS Office files. How to Compress InDesign PDF Files The following is a step-by-step tutorial on how to compress InDesign PDF files that are too large. Import the InDesign PDF by clicking "Open File..." on the main window, or dragging and dropping your file into the program. Step 2: Compress InDesign PDF Optimizing your PDF file by clicking the "File" button which will open a variety of options for your document. Click the "Optimize" button to shrink your file to a more desirable size that will make it easier for sharing and printing. Step 3: Custom Optimization Option Choose the level of optimization that best suits your needs. The four available options include: Web-ready. This is mostly for on-screen viewing content and for images that are larger than 150 dpi. This file size can be ideal if the print quality is not as important. Office-ready. This optimization option is mostly used for office or home printing. Mostly suited for images with a resolution larger than 300dpi. The print quality will be average and relatively compact. Print ready. This option is for quality and professional printers required for commercial printing. Images that have a resolution larger than 600dpi become downsized. Custom optimization allows you to manually change the settings of color images, greyscale images, and monochrome images. How to Reduce InDesign File Size for PDF with InDesign Below is a step-by-step guide on how you can reduce file size with InDesign. Step 1: open your PDF document and click "file" then "export". Step 2: name the PDF file and choose a destination for your saved file. Click "save". Step 3: click "smallest file size" out of the options listed in the drop-down menu. Step 4: click "compression." This option is available on the left side of the menu in the settings page. Step 5: you can now downsize each image to about 72 pixels in every inch. This size makes your file more suitable for printing. Step 6: choose a particular image compression for your colored and greyscale images. If you are interested in obtaining the smallest version of your PDF file, then select the "low" option. If you are interested in having a clearer image, go for a larger size by selecting "medium". Step 7: choose the most appropriate compression format depending on your document. If your PDF file consists of photographs, then select the "automatic" option. If the file has solid color graphics like graphs, logos and clip art then the "ZIP compression" option will be a better choice. Step 8: select the output located on the left side of the menu and click on the "ink manager" option. Step 9: convert the available spot colors by first looking for a circle that is inside a square icon. This can be found on the left side of the ink manager window. Select the spot color icon and click "OK". Free Download or Buy PDFelement right now! Free Download or Buy PDFelement right now! Buy PDFelement right now! Buy PDFelement right now!
